

# Consumers' and non-business stakeholders' opinions on sustainability in the soy and beef chain

Biofach  
February 14<sup>th</sup>, 2013

Hanna Stolz, Monica  
Goddard, Maria Salud,  
Ingrid Jahrl

# Objective

- To identify consumers' and other non-business stakeholders' attitudes, perceptions and awareness regarding the sustainability of soy and beef supply chains

# Methods

## Consumer survey:

- Online survey in 2012, organised by UNAM
- Focus on beef
- Conducted in Brazil (BRA), Mexico (MEX), Italy (IT), and Netherlands (NL)
- Sample description: total n=864
  - BRA: n=522
  - MEX: n=140
  - IT: n=131
  - NL: n=71
- Share of persons < 45 years: 41-45%
- Share of female: in BRA 41%, MEX 61%, IT 54%, NL 59%

# Methods

## **Non-business stakeholder survey:**

➤ Online survey, organised by FIBL; separate questionnaires for beef and soy chain

➤ Sample description:

- N=48 (of ca. 250 contacted organisations/institutions)
- LA (Brazil, Argentina): n=26  
EU (Netherlands, Germany, Belgium, Italy): n=22
- Beef supply chain: n=23
- Soy supply chain: n=25
- Mainly representatives of environmental and social non-profit organisations, universities, and agricultural, environmental and health ministries/departments

# Results

- Most important buying motives for consumers when choosing meat/beef
  - Taste
  - Colour
  - Food safety
- Sustainability motives less important

# Results

**Table 1: Relevance of environmental sustainability impacts**

|   | Consumers   |             | Non-business stakeholders |             |
|---|-------------|-------------|---------------------------|-------------|
|   | Mean        | Std.        | Mean                      | Std.        |
| <b>Environmental impacts*</b>             |             |             |                           |             |
| <b>Water quality</b>                      | <b>5.63</b> | <b>1.73</b> | <b>5.65</b>               | <b>1.36</b> |
| <b>Soil quality</b>                       | <b>5.56</b> | <b>1.67</b> | <b>5.83</b>               | <b>1.13</b> |
| <b>Waste produced</b>                     | <b>5.52</b> | <b>1.72</b> | <b>4.77</b>               | <b>1.60</b> |
| <b>Biodiversity</b>                       | <b>5.52</b> | <b>1.82</b> | <b>6.08</b>               | <b>1.16</b> |
| <b>Land use change natural land</b>       | <b>5.50</b> | <b>1.84</b> | <b>5.69</b>               | <b>1.60</b> |
| <b>Water used</b>                         | <b>5.37</b> | <b>1.78</b> | <b>5.46</b>               | <b>1.54</b> |
| <b>Mineral resources used</b>             | <b>5.29</b> | <b>1.73</b> | <b>5.00</b>               | <b>1.75</b> |
| <b>Land use change within agriculture</b> | <b>5.24</b> | <b>1.82</b> | <b>5.25</b>               | <b>1.66</b> |
| <b>Air quality</b>                        | <b>5.21</b> | <b>1.74</b> | <b>5.39</b>               | <b>1.51</b> |
| <b>Energy used</b>                        | <b>5.03</b> | <b>1.67</b> | <b>5.51</b>               | <b>1.49</b> |

**Table 2: Relevance of social and economic impacts**

|   | Consumers   |      | Non-business stakeholders |             |
|---|-------------|------|---------------------------|-------------|
|   | Mean        | Std. | Mean                      | Std.        |
| <b>Social and economic impacts*</b>             |             |      |                           |             |
| <b>Food safety and security</b>                 | <b>5.98</b> | 1.70 | 5.38                      | 1.78        |
| <b>Labour rights, including child labour</b>    | 5.69        | 1.76 | 5.38                      | 1.70        |
| <b>Value added in local chain and community</b> | 5.42        | 1.68 | <b>5.52</b>               | <b>1.41</b> |
| <b>National economy</b>                         | 5.43        | 1.68 | 5.10                      | 1.45        |
| <b>Farm income</b>                              | 5.37        | 1.68 | 5.44                      | 1.50        |

\*measured on scale from 1= unimportant to 7= highly important;  
Std.= standard deviation

# Results

**Table 3: Relevance of measures to enhance sustainability according to the non-business stakeholders**

| <b>Measures to enhance sustainability*</b> | <b>Mean</b> | <b>Std.</b> |
|--|-------------|-------------|
| <b>Financial compensations</b>             | <b>4.06</b> | <b>1.06</b> |
| <b>Support initiatives</b>                 | <b>4.02</b> | <b>0.89</b> |
| <b>Deforestation prevention</b>            | <b>3.94</b> | <b>1.10</b> |
| <b>Support research</b>                    | <b>3.94</b> | <b>1.12</b> |
| <b>More priority to local sourcing</b>     | <b>3.85</b> | <b>1.22</b> |
| <b>Advice and training</b>                 | <b>3.75</b> | <b>1.16</b> |
| <b>Link of policy agendas</b>              | <b>3.75</b> | <b>1.02</b> |
| <b>Support of production</b>               | <b>3.69</b> | <b>1.13</b> |
| <b>Market transparency and niches</b>      | <b>3.56</b> | <b>1.13</b> |
| <b>Facilitation of trade</b>               | <b>3.52</b> | <b>1.32</b> |

\*Scale from 1=not important at all to 5=highly important; Std. = standard deviation

# Results

- Obstacles hindering sustainability according to non-business stakeholders
  - Increasing soy demand
  - Economic interests e.g. the interests of big GM seed providers, of multinational retailers, and of large trading companies
  - Weak regulatory framework at both local and international level; inefficient or non-existent policies for encouraging sustainable production systems
  - LA: lack of enforcement of existing policies; import tariffs
- Most important actors in increasing sustainability:
  - National and international policy makers
  - Large-scale producers and processors
  - Consumers

**Table 5: Non-business stakeholders: standards' efficiency to enhance **environmental** sustainability**

| Standard  | *Efficiency | Don't know (%) |
|---|-------------|----------------|
| <b>Organic standards</b>                            | <b>3.77</b> | <b>11.4</b>    |
| <b>SAN Rainforest Alliance</b>                      | 3.40        | 34.8           |
| <b>Global GAP</b>                                   | 3.34        | 22.2           |
| <b>Business Social Compliance Initiative (BSCI)</b> | 3.23        | 51.1           |
| <b>SA 8000</b>                                      | 3.19        | 42.2           |
| <b>Leaf marque</b>                                  | 2.80        | 53.5           |

Scale from 1= very unefficient to 5= highly efficient

# Results

- Consumers' familiarity and perception of efficiency of standards and labels

# Results

- Consumers' familiarity with and perception of labels
  - Organic Labels:  
USDA Organic → known by 30% of the respondents in LA
  - EU Organic label → NL 43%, IT 73%
  - Fair Trade label → NL 80%, IT 66% but only 12% in LA
  - The SAN Rainforest Alliance → 21-24% in LA and EU
  - Organic standards (EU and USDA) considered as most effective standards, followed by Fair Trade standard and SAN Rainforest Alliance standard

# Conclusions

- Policy makers are considered as key players in enhancing sustainability in the beef and soy chain
- Creating policy framework is most important measure to improve sustainability
  - Financial support and incentives considered as most effective tools
- More need for action regarding soy than for beef chain
  - Biodiversity
  - Soil and water quality
  - Waste produced and
  - Land use change from natural to agricultural land

# Conclusions

- Standards (and labels): Non-business stakeholders and consumers consider existing (organic) standards as quite efficient to improve sustainability
  - Improve existing standards rather than creating new standards
  - Sustainability labels, apart from organic and fair trade labels still unknown by large amount of consumers
- Low consumer awareness of sustainability
- (Majority of) consumers will not serve as driver to increase sustainability of beef and soy chain
- Policy and marketing strategies necessary to raise consumer awareness – focus on specific sustainability impacts
