Conclusion

- As in 2014, the organic area has shown good growth.
- The market grew at a higher rate than the organic land, and at a higher rate than in the past.
- Imports of organic products into Italy are constantly rising due to surge in demand and the insufficient domestic production. Many of the big markets are dependent on imports.
- A policy mix of supportive measures (in addition to the area payment) are needed to improve conversion rate.
- Enhance the collaborative role of the supply chain members → common policy and marketing strategy
