

Problematic weed species in spring sown cereals around the Baltic sea – An expert database

Merel A. J. Hofmeijer¹, B. Melander², R. Krawczyk³, J. Salonen⁴, T. Verwijst⁵, L. Zarina⁶ & B Gerowitt¹

Overview

Implications

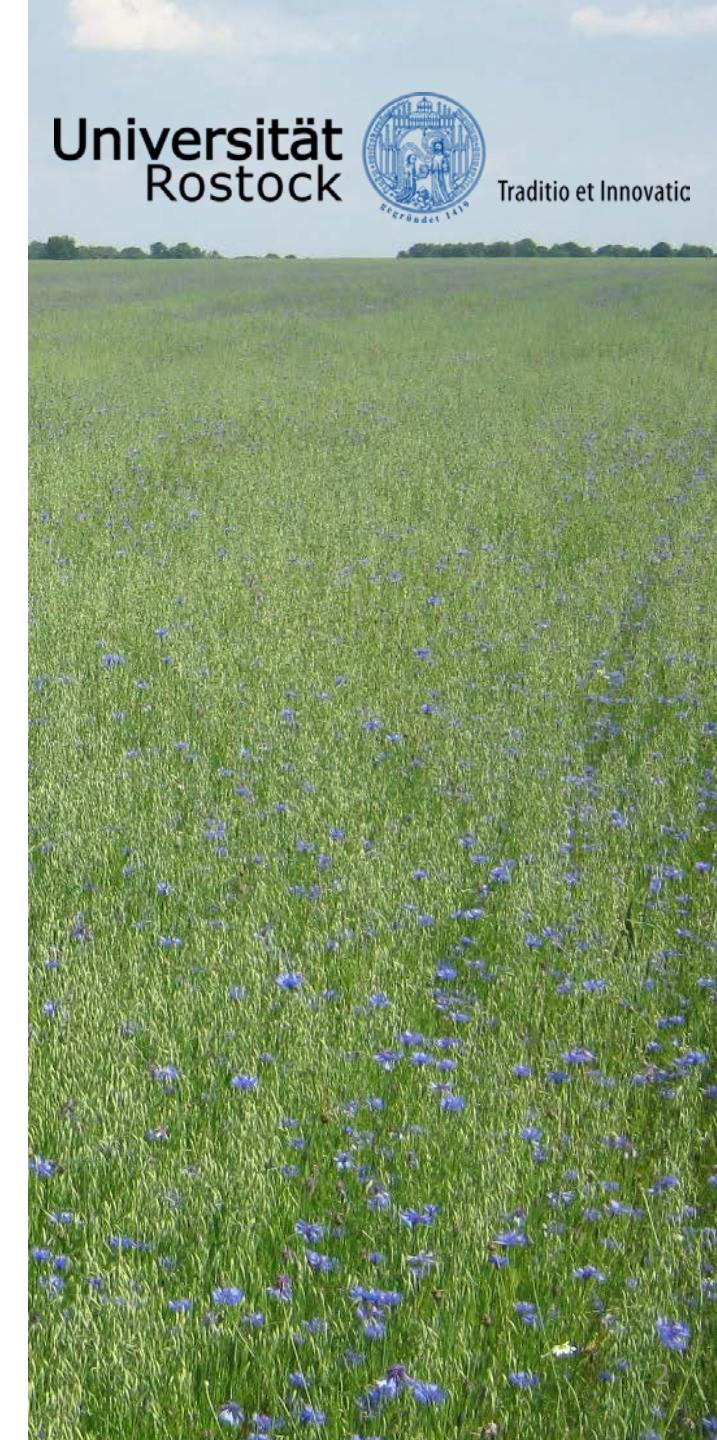

Context and Objectives

Project PRODIVA

Expert database

Key results and Discussion

Comparison with weeds found in survey

Implications for tuning-up Organic production

Weeds = Bad (?) → quantity and quality

Increased knowledge on ‘problematic’ weeds

Utilization of Agro-biodiversity for weed control

Additional tools for farmer

Short context – Organic weed control

Weed reduction strategies in Organic Agriculture:

Direct/physical methods

Mechanical weeding

Thermal treatments

Cultural measures

Crop cultivar

Seedbed preparation

Use of mulches

Systematic methods

Crop diversity in space and time

PRODIVA: Pro Diversity

Better utilization of crop diversification strategies for weed management in North European organic arable cropping systems.

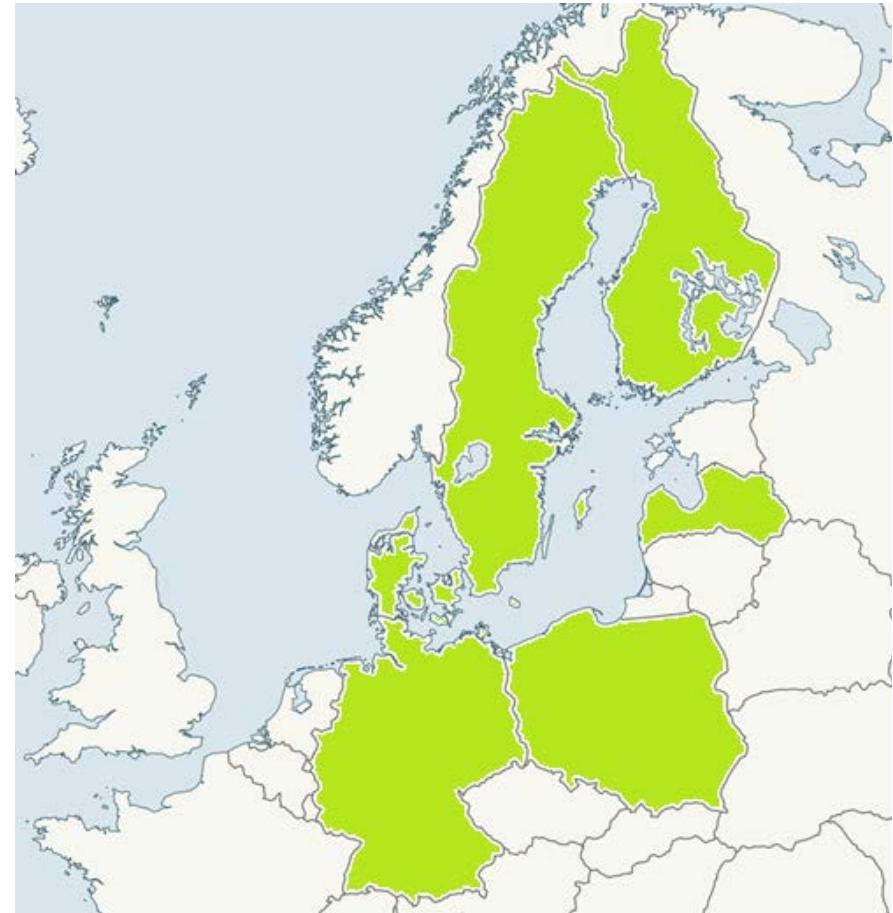

To maintain diverse arable weed vegetation that is manageable in the long-term and could fulfill other necessary system-functions including support of beneficial organisms.

AARHUS UNIVERSITY

Institute of
Agricultural Resources
and Economics

Setting the scene

Better utilization of crop diversification for weed management in North European organic arable cropping systems.

Maintain weed diversity that is manageable and provides ecosystem services

Goal

Objectives

Methods

Analysis

Setting the scene

Better utilization of crop diversification for weed management in North European organic arable cropping systems.

Maintain weed diversity that is manageable and provides ecosystem services

Identify current utilisation and effect of **crop diversification strategies** on weeds in organic arable cropping systems in practice.

Objectives

Methods

Analysis

Setting the scene

Better utilization of crop diversification for weed management in North European organic arable cropping systems.

Maintain weed diversity that is manageable and provides ecosystem services

Identify current utilisation and effect of **crop diversification strategies** on weeds in organic arable cropping systems in practice.

Identify existing practical weed challenges

Investigate the role of crop diversification strategies on weed vegetation on farms

Cluster weed species into groups in accordance to their susceptibility for the applied crop diversification strategies.

Methods Analysis

Setting the scene

Better utilization of crop diversification for weed management in North European organic arable cropping systems.

Maintain weed diversity that is manageable and provides ecosystem services

Identify current utilisation and effect of **crop diversification strategies** on weeds in organic arable cropping systems.

Identify existing practical weed challenges

Investigate the role of crop diversification strategies on weed vegetation on farms

Cluster weed species into groups in accordance to their susceptibility for the applied crop diversification strategies.

Method 1: Expert database

Analysis

Setting the scene

Better utilization of crop diversification for weed management in North European organic arable cropping systems.

Maintain weed diversity that is manageable and provides ecosystem services

Identify current utilisation and effect of **crop diversification strategies** on weeds in organic arable cropping systems.

Identify existing practical weed challenges

Investigate the role of crop diversification strategies on weed vegetation on farms

Cluster weed species into groups in accordance to their susceptibility for the applied crop diversification strategies.

Method 1: Expert database

Method 2: Weed survey and field history variables

Analysis

Expert database

Ranking problematic weed species in Organic spring sown cereals for every country.

Literature research in national scientific and grey literature

Information from extension services and other experts

Formulation of top 10 problematic annuals and perennials

Data collected

Project context

Folder for extension services and farmers

Weed types

Working with subjective perception / Categorization

Annuals:

Bodybuilders

Early birds

Plebeian

Perennials:

Indestructibles

Grassland

Expert database

Geographical distribution of challenging weed species

Current knowledge in organic arable farming
in the Baltic sea region

CORE Organic II

Latin Name	DE	DK	SE	FI	LV	PL	Weed type
<i>Chenopodium album</i>	x	x	x	x	x	x	Bodybuilder
<i>Polygonum spp.</i>	x	x	x	x	x	x	Bodybuilder
