

Brewer's yeast for organic pigs

Problem

Protein supply is a constant challenge for organic farming. Organic raw materials with high protein content are quite scarce in some regions. The search for alternative sources of protein leads to the evaluation of the organic industry by-products.

Solution

Brewer's yeast is a by-product of beer in brewing industries. It is considered a liquid by-product (figure 1) with approximately 15% dry matter (DM). It is obtained from the anaerobic fermentation of beer, formed, among other ingredients, by *Saccharomyces cerevisiae*. Brewer's yeast has a high content of protein and vitamins of the B complex, which compensates the high transport costs due to its high water content.

Benefits

- Yeast has a high content of protein (> 47% DM) of high biological (3.6% of lysine) and digestible value (> 85%), thus reducing the cost of feed.
- Yeast is rich in B vitamins, especially biotin and folic acid (besides vitamin B1, B2, B6, B12, PP, B5) and in vitamin D, with a content of 2000 - 5000 IU¹/g DM.
- The content of phosphorus in the yeast is up to 0.8-1.3%.

Applicability box

Theme

Pigs

Context

Farms close to an organic brewery.

Application time

All year, although it is more available in spring and summer.

Required time

None; but no more than two days of storage.

Period of impact

None.

Equipment

Special equipment is needed, including an automatic system for liquid feeding and two storage tanks (figure 2) so that they can be cleaned between batches.

Best in

Sows, growers and fattening pigs.

Figure 2: Tanks for yeast. V. Rodríguez-Estévez, Universidad de Córdoba

¹ International Unit

- Yeast promotes animal performance and health.
- Yeast improves the quality of the carcass.

Practical recommendation

- Two holding tanks are needed for hygiene reasons.
- Yeast deteriorates very easily, do not use the product stored over 2 days.
- It is necessary to deactivate (kill) the yeast before transporting and using it on the farm. Hence, autolyzed yeast should be used.
- Yeast is a quite seasonal product, and it cannot be stored; however, it can be added to silage mixtures as an alternative to avoid its deterioration.

Further information

Video

- The video "[Liquid Feed for pigs](#)" is available from Lallemand Animal Nutrition. The video shows how liquid feed systems work.

OK-Net EcoFeed: This practice abstract was elaborated in the Organic Knowledge Network on Monogastric Animal Feed project. The project is running from January 2018 to December 2020. The overall aim of OK-Net EcoFeed is to help farmers, breeders, and the organic feed processing industry in achieving the goal of 100% use of organic and regional feed for monogastrics.
