

Organic Greenhouse Production: Towards an Agroecological Approach in the Framework of the New European Regulation

Fabio Tittarelli, the coordinator of the CORE Organic Cofund Greenresilient project recently published a new scientific article on organic greenhouse production “Organic Greenhouse Production: Towards an Agroecological Approach in the Framework of the New European Regulation—A Review” in *Agronomy*.

2020.01.31 | LAURA KEMPER

Multidimensional components of sustainability in an agroecological approach to organic greenhouse production

The paper describes the evolution of the debate on organic greenhouse production in Europe. It also references the new regulation on organic farming (Reg 848/2018), which introduces new measures for greenhouse production. The paper shows that while the regulation takes up some of the conclusions from the multi-actor discussion, there are still knowledge gaps and research needs, some of which are being addressed by the Greenresilient project.
