

# Classification list for price data

Provided by EISfOM Partner Markus Rippin of ZMP, Bonn, Germany (www.zmp.de)

This classification list for price data was processed by EISfOM in order to provide a structured classification systematic to obtain comparable data and enable the exchange of data between national and Eurostat databases. A correspondence table for every national database should be defined, to link national codecs to those of Eurostat.

As Eurostat uses a highly aggregated level of crop details (due to the lack of availability of data), member states should be free to use as many disaggregations as needed for their individual purposes, as case in the present list of ZMP in Germany. As long as a correspondence table is defined and data are recorded in a consistent structure, there should not be no problem to exchange data with Eurostat.

12112000		<b>cow milk</b>				

\* specification only for wholesale and retail relevant

\*\*quality standard for organic products normally is class 2 or quality 2 if not mentioned separately

wheat I: crude protein > 11,5%, falling number 240-280, sedimentation value > 35, gluten > 26%

wheat II: crude protein < 11,5%, falling number > 220, sedimentation value > 25, gluten 22-26%

rye: falling number > 120

spelt: crude protein 14-15%

malting barley: crude protein < 11,5 %,

oats: hectolitre > 54 kg

 these categories are not necessary as prices are determined by season and not by growth patterns
